

How can we find out what will
happen to our countries due to
climate change?

Group A

Who can we ask?

- Ask environment scientists via the internet about what will change and how we can avoid it?
- Watch the news to see, what is changing in our country

The consequences

- If the ground dries up, we will have to find new plants to plant, which will be a problem in desert areas
- In Sweden, the trees are a big source of income, so if we loose the trees, we loose lots of money
- In Italy, the glaciers are melting, which results in less tourism
- In Germany, the industry will suffer if all the trees die
